I've been reading a lot of business books to get information on how to grow my business. Of all those books, this one is mostly fluff. Many of the statements are vague and ambiguous. There isn't much for solid advice. Buzzwords are used everywhere (Do you want a "value-added investor" funding your business?) Numbers and statistics are nonexistent other than a few graphs that look like they were sketched by hand. The author tends to throw lots of questions at you to think about, but doesn't give any advice on the topics. There were a few bits of useful information on how other people will look at your business and value it, but it's not worth reading through the whole book for them. They could have been summarized in a bulleted list on a few sheets of paper. If you're looking for a good book on how to obtain venture capital, check out *Venture Capital Handbook*, by David Gladstone.

Lots of books come and go on this topic. Jeff Timmons and his team get to the core issues and explain them to a non-technical audience.

This was one of my first books on the subject of corporate finance and I recommend it. I'm now studying Finance and I still keep it around.

This book gives good resources available to entrepreneurs that want to start their own business. A book you should also check out is "The Wal-Mart Way" by Don Soderquist, it gives the inside story

of the success of the world's largest company.
